Primary Care Clinic

AWARD : IIDA Premiere Awards 2026 - Student Project Winner

Located in **Whitefish, Montana**, this primary care clinic is inspired by the town's mountain landscape, ski culture, and deep connection to nature. Guided by the concept of Guiding Slope, the design transforms the experience of moving through a ski resort into an intuitive healthcare journey that supports both physical and emotional well being.

Patients are welcomed through a **warm, contemporary lodge inspired** entrance before transitioning into **cool, snow inspired clinical spaces** that reflect the surrounding alpine environment. **A continuous curved ceiling** follows the natural rhythm of mountain slopes, creating intuitive wayfinding and guiding patients through the clinic with clarity and ease.

Inspired by the shelter of natural rock formations, the **cave inspired sensory room** provides a calming retreat for **neurodiverse patients** and those experiencing sensory overload. Rather than feeling sterile or institutional, the clinic creates a **human centered healthcare environment** that is rooted in place, promotes comfort, and encourages healing through thoughtful spatial organization and meaningful connections to nature.

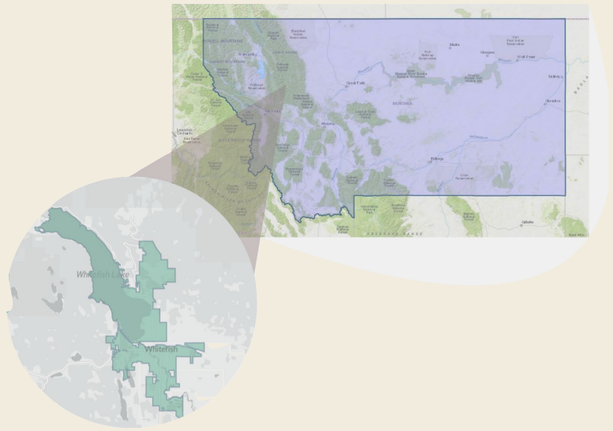
Research + Community Context

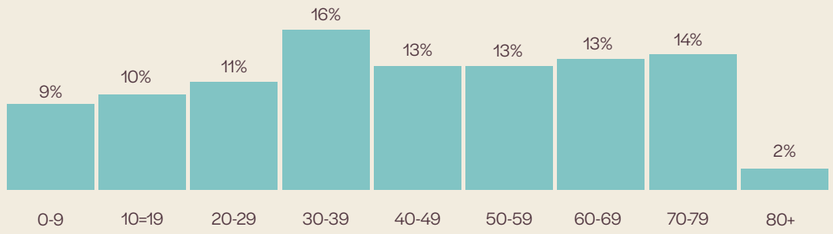
This clinic proposal is grounded in **demographic research** and **evidence based design**.

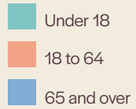
Located in **Northwest Montana**, the region faces **limited healthcare access, provider shortages,** and long travel distances for specialty care.

Whitefish's growing population of retirees, working families, and seasonal residents informed a design that supports diverse physical, cognitive, and emotional needs.



Demographic by age range





2388

Population 65+ (Esri)

839

Households with Disability (ACS)

Together, the data points to a community with a **large aging population**, a meaningful share of **residents with disabilities**, and **neurodiverse needs** that a clinic here has to plan for. These findings set the design priorities before any space was drawn.

Ski Resort Inspired Design

The concept shapes a **clinic that feels restorative rather than clinical,** carrying the calm and energy of the landscape indoors through warm materials, natural daylight, and easy wayfinding.
Every move was then tested against evidence based design, FGI Guidelines, HIPAA, and biophilic standards to fit the needs of the people it serves.

The waiting lounge **reimagines the ski lodge as a contemporary place of pause**, where layered wood tones, soft textures, and clean lines create warmth without sacrificing clarity. Rooted in the spirit of Whitefish, the space balances **hospitality with healthcare**, offering patients a calm, dignified arrival experience that feels both restorative and distinctly local.

The waiting lounge reinterprets the **warmth of a mountain lodge** within a healthcare setting. Layered wood tones, soft textures, and varied seating create a **comfortable, welcoming arrival**, while curved forms and clear sightlines support intuitive movement toward the clinical areas.

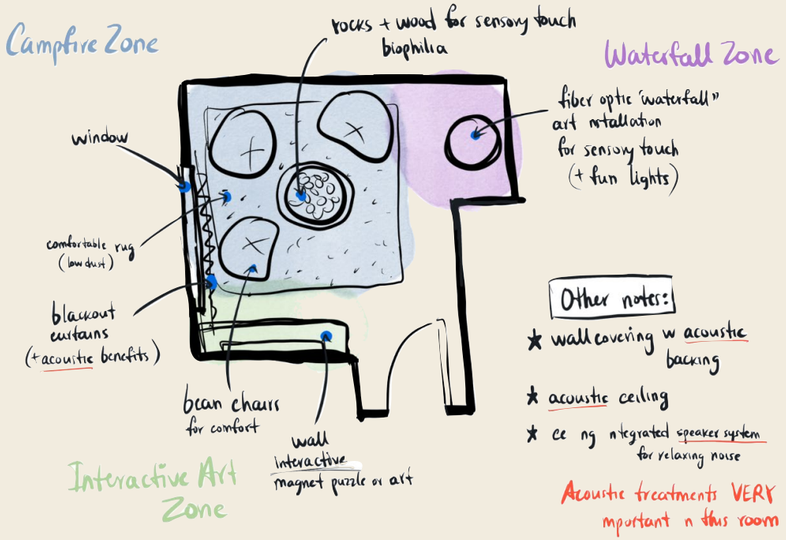
SENSORY ROOM

The sensory room offers a gentle retreat for **neurodivergent users** who may experience clinical environments as overstimulating, providing a space to regulate, reset, and feel in control.

Fiber optic strands, tactile wall magnet puzzles, soft bean seating, and a faux campfire vignette create **layered sensory engagement** inspired by Montana's outdoors.



AI-assisted visualization tools were used to accurately translate the intended glow from **fiber optic strands** and **campfire elements** into the final render.

The patient rest nook provides a **gentle transition between treatment and departure**, offering patients a place to pause and recover after procedures such as blood work. Located beside the nursing station, it allows for discreet monitoring and quick assistance while maintaining comfort and autonomy.

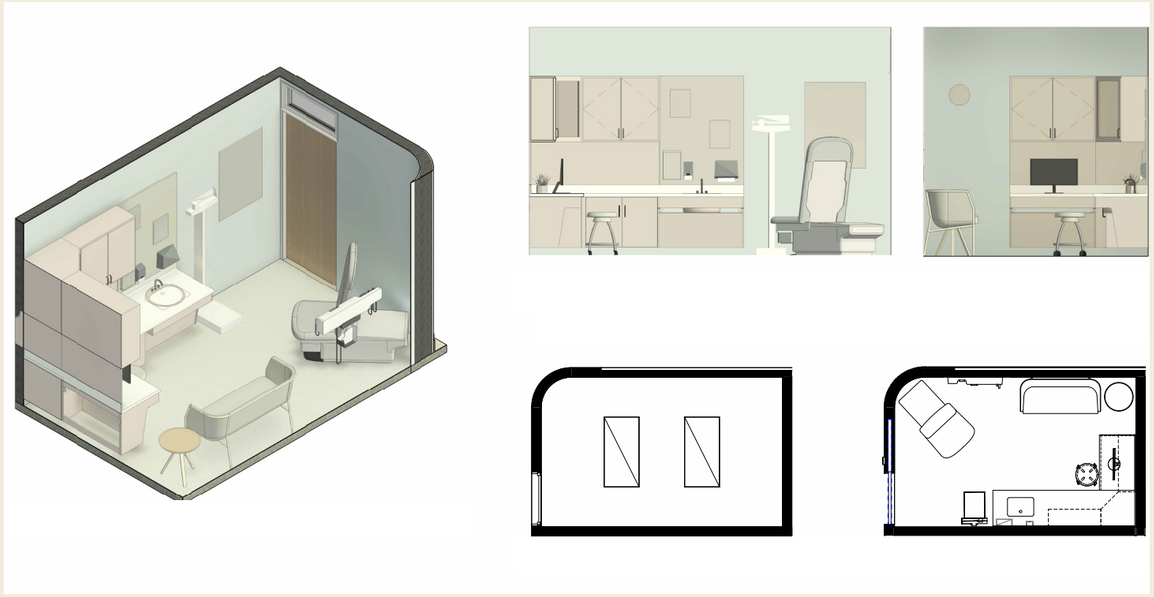
The exam room balances **clinical efficiency** with **patient well being,** using **evidence based design** strategies to create a calmer healthcare experience.

Borrowed daylight through transom glazing, curated artwork as **positive distraction**, and a restrained palette with subtle green tones introduce biophilic elements within a highly functional layout.



The nursing station serves as the **clinical hub** of the clinic, providing efficient access to every patient zone. A glazed connection to the practitioners' offices supports **visual communication** and team collaboration, while a restrained material palette and streamlined detailing promote clarity, hygiene, and efficient clinical workflows.

The staff retreat is designed as an extension of care, offering **daylight filled lounge areas,** a communal table for shared meals and informal collaboration, and quiet seating within an open kitchen that encourages moments of rest throughout the day.

In a rural community where every healthcare professional is essential, the space reflects the warmth of the public areas while supporting **staff well being, connection, and long term retention.**

02 *Arco Della Pagine*

Florence Bookstore

Arco della Pagine is a contemporary bookstore located within the historic Generali Building in **Piazza della Signoria, Florence**. Inspired by the surrounding civic architecture, the project reinterprets the arch as a layered spatial system that organizes movement, frames views, and creates a contemporary dialogue with its historic context.

Large, repeated arches preserve the **monumental scale** of the piazza while dividing the interior into intuitive zones without compromising openness. Through **layering, framing, and repetition,** visitors move through a sequence of spatial thresholds that gradually reveal the bookstore, creating moments of discovery and connection.

Rather than replicating Renaissance architecture, the design transforms a historic architectural language into a **contemporary civic interior** where architecture, literature, and public life come together.

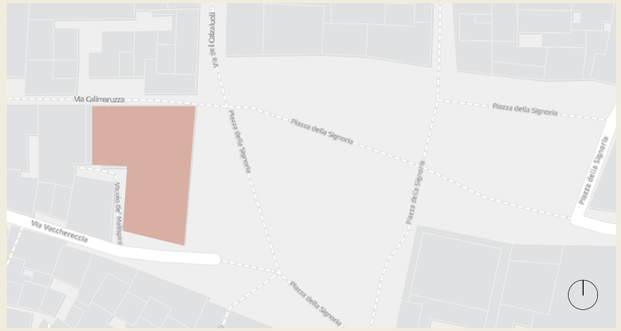
SEMESTER

Summer 2025

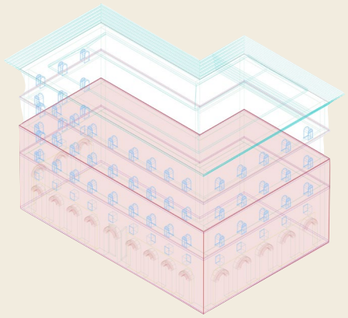
DURATION

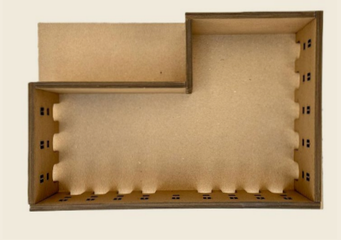
8 Weeks

Location : Piazza della Signoria, Florence, Italy

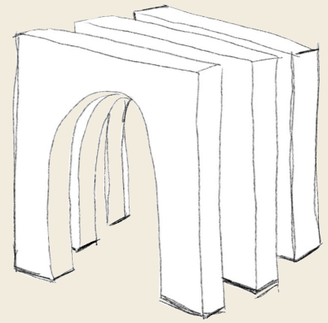


Located within the historic **Generali Building** in Piazza della Signoria, the project responds to one of Florence's most significant civic spaces. Defined by **monumental architecture**, public gathering, and centuries of layered history, the piazza establishes a dialogue between the city and the bookstore. The design focuses on the first two levels of the existing structure, allowing the historic shell to frame a contemporary interior while preserving its architectural presence.

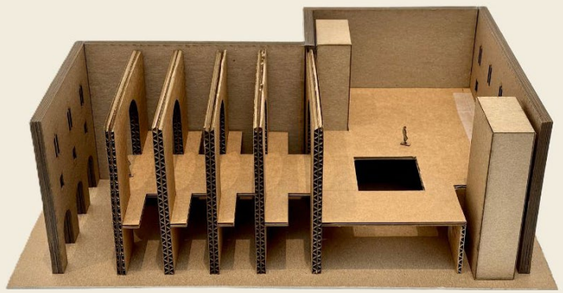




Layered Arches



The **Layered Arches parti** emerged through a series of physical study models exploring **scale, depth, and repetition**. Stacking and shifting arched planes led to four monumental walls that organize circulation, frame views, and naturally define three spatial zones. **Thickened arches integrate book storage, seating, and display** within their depth, allowing the **architecture itself** to become both furniture and spatial organizer throughout the bookstore.



The interior is organized through a clear **spatial hierarchy,** with public gathering spaces on the lower levels and quieter, more intimate areas above. Thickened arched walls define each zone, integrating book storage within their depth while guiding circulation throughout the bookstore.

As visitors move upward, the spaces become more enclosed and contemplative, creating a **gradual transition.** Circulation and program remain closely connected, maintaining visual continuity while supporting moments of discovery and retreat.

Amber and saffron tones echo the warmth of Mark Rothko's Yellow and Orange works. **Curved furnishings and arched forms** soften movement, while stone and light woods reflect Florence's material heritage. Airy fabrics and subtle biophilic touches create a **romantic, luminous feeling**, like birds gliding across a quiet sunset sky.

The material palette balances **monumentality and intimacy,** drawing from Florence's layered architectural character. **Warm wood and leather** bring a sense of history and craftsmanship, while stone, glass, and soft color accents add lightness and clarity, guiding visitors through a series of **framed moments of discovery**.

03 *Glacier's Peak*

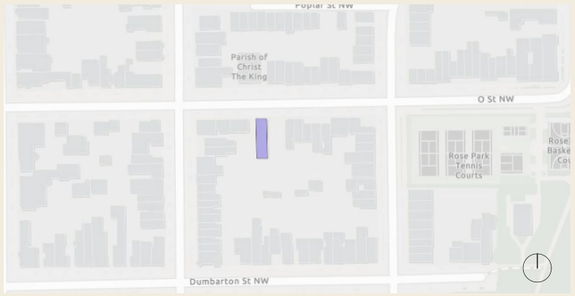
Artist Live + Work Space

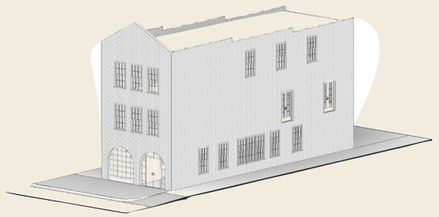
This live work project was **designed for Zaria Forman**, whose large scale pastel drawings capture the fragile beauty of glaciers and changing landscapes. Located within a narrow Georgetown townhouse, the design transforms the upper two floors into a home, studio, gallery, and office, creating a place where living, making, and exhibiting coexist within a single vertical environment.

Inspired by Forman's work, **the concept explores contrast** through vastness and intimacy, lightness and density, and cool and warm. The studio is open and filled with natural light, reflecting the expansiveness of glacial landscapes, while the living spaces become warmer, quieter, and more grounded. Together, the spaces translate the emotional atmosphere of her artwork into a home that supports both creativity and everyday life.

PROGRAMS USED	STUDIO	SEMESTER	DURATION
R Ps	Studio 2 - Residential	Spring 2025	4 Weeks

LOCATION | 2722 O St NW, Washington DC



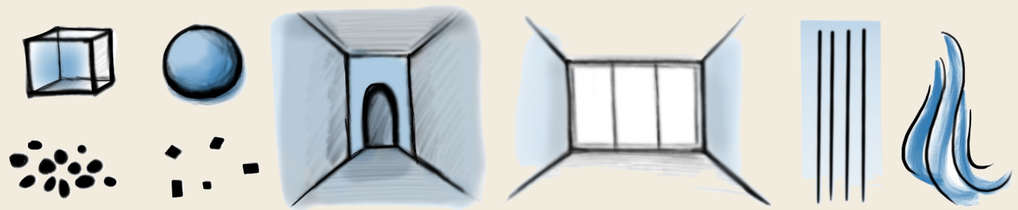


Located within a **narrow historic Georgetown townhouse**, the project occupies the upper two floors and responds to the building's **compressed footprint and vertical organization**.

CLIENT | Zaria Forman

Zaria Forman is a contemporary artist known for **large-scale pastel drawings of glaciers and polar landscapes** that explore the effects of **climate change.**

CONCEPT | Dualities



Dualities emerged from the relationship between Zaria Forman's **expansive glacial landscapes** and the **compressed spatial conditions** of the Georgetown townhouse. Through iterative sketch studies, I explored opposing qualities—**narrow and wide, linear and curved, solid and void**—to understand how contrast could organize the interior experience.

Level 1 Level 2 Level 3

The living spaces feature a warm palette of beige, wood, and stone, inspired by the quiet atmosphere and subtle tonal qualities of Zaria Forman's artwork. Carefully selected furnishings emphasize durability and **sustainability**, creating a timeless environment designed for everyday living.

04 *Between Ages*

Intergenerational Center

Between Ages is an **intergenerational community center** designed for seniors and children ages 4 to 8, bringing both generations together through shared everyday experiences. Inspired by the growing isolation of older adults and the separation of age groups in today's communities, the project creates opportunities for **connection, learning,** and **care** through everyday interaction.

Guided by the concept of **Framed Storytelling**, the design balances visibility and privacy through layered spaces that encourage curiosity without sacrificing comfort. **Classrooms, lounges**, and **shared gathering spaces** are carefully organized to support both structured activities and spontaneous moments between generations.

Rather than separating users by age, the center fosters relationships through shared space, proximity, and daily routines. The result is a welcoming environment that promotes **emotional, social,** and **cognitive wellbeing**, strengthening community while **reducing loneliness and age related stereotypes**.

PROGRAMS USED	STUDIO	SEMESTER	DURATION
R Ps Id Ai	Studio 5 - Capstone	Spring 2026	18 Weeks

Located within the **Southwest Neighborhood Library, Between Ages** transforms an existing civic building into an **intergenerational community center** where seniors and children learn, play, and connect through everyday experiences. By bringing generations together rather than separating them, the design encourages **shared learning, meaningful relationships**, and a stronger sense of community, demonstrating how existing public spaces can support social and emotional wellbeing.

WHY INTERGENERATIONAL DESIGN?

SOCIAL ISOLATION IN SENIORS

1 in 4

experience social isolation.

AGE-SEGREGATED CHILDHOOD

Most children

spend their days in age-segregated settings.

MISSED OPPORTUNITY FOR CONNECTION

Less than 6%

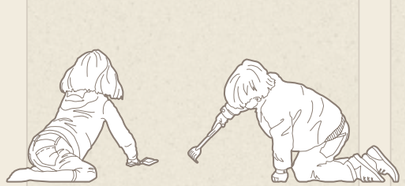
of senior facilities are intergenerational.

INTERGENERATIONAL PROGRAM

STRUCTURED LEARNING

- Lifelong learning
- Classrooms (ages 4–8)
- Reading & Study

INTERACTIVE PLAY

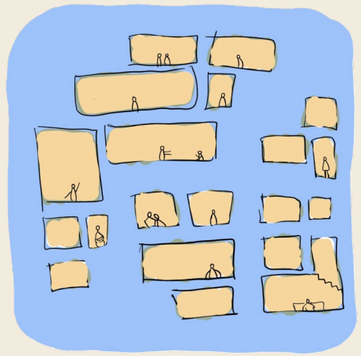


- Play Nest
- Interactive play
- Social Connection

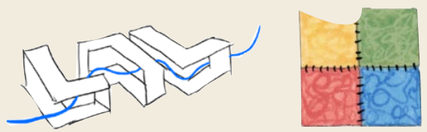
FOOD & GATHERING

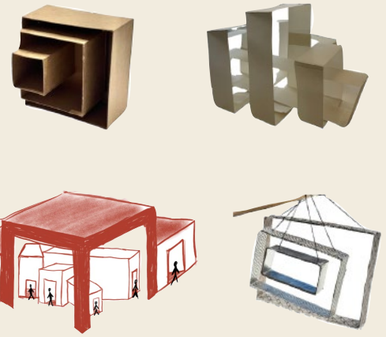
- Pantry café
- Health & nutrition
- Communal meals

CONCEPT DEVELOPMENT



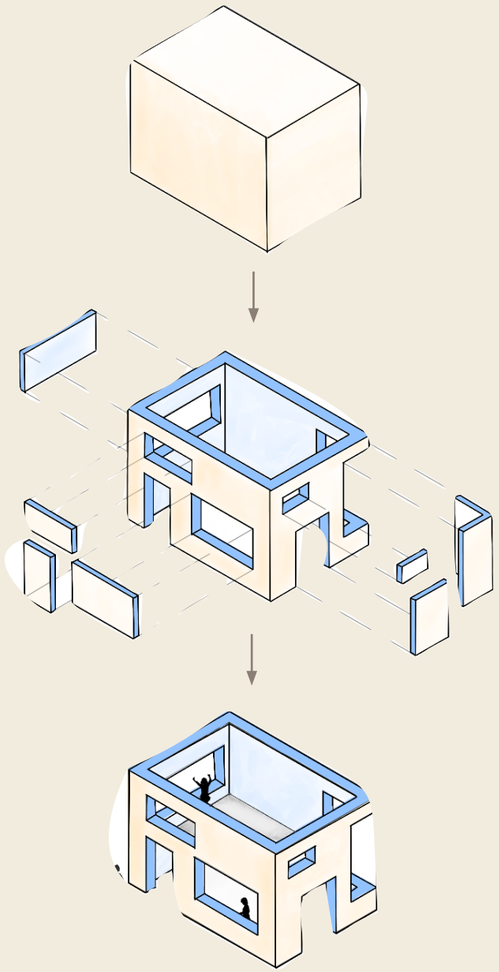
Architecture as a series of curated glimpses.





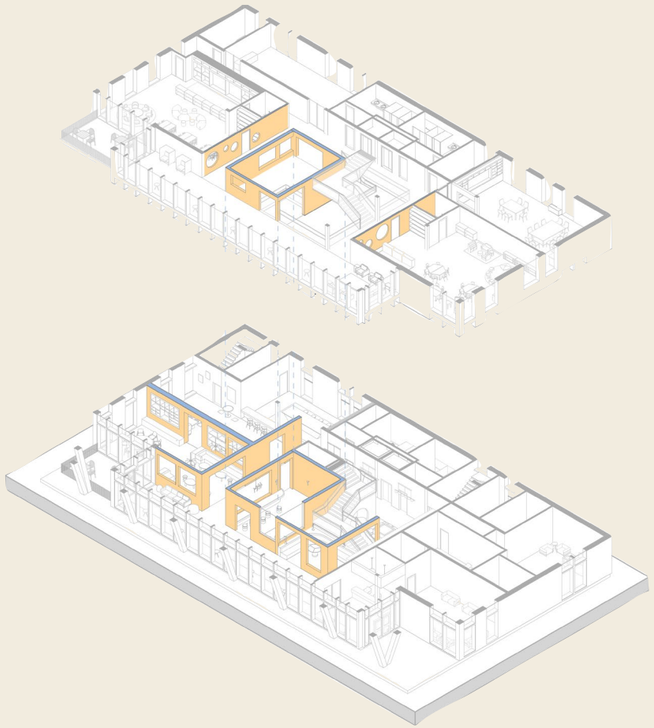
Guided by the concept of **Framed Storytelling** the design explores how **framing** can balance **connection and protection** between generations.

Openings carved from solid forms create layered thresholds that encourage **visual connection** while maintaining comfort, privacy, and security.



Through **iterative sketches** and **physical models,** I explored how framing could shape visibility, privacy, and connection before developing the final architectural form.

CONCEPT APPLICATION



A Day at Between Ages

1 Arrival

The arrival sequence welcomes visitors from the surrounding neighborhood and adjacent park.

2 Checkpoint

A welcoming reception provides clear orientation while maintaining visibility across the shared commons.

3 Commons

The central commons acts as the heart of the building, encouraging visibility and interaction across generations.

4 Play Nest

Flexible play spaces encourage shared exploration through puzzles, tactile activities, and collaborative play.

5 Arts

Shared arts spaces encourage creativity, conversation, and creative collaboration across generations.

6 Lounge

Located along the north glazing, the lounge provides daylight, views, and quiet opportunities for rest and social connection.

7 Classroom

Framed openings maintain visual connection between classrooms and shared spaces while preserving comfort and supervision.

8 Pick Up

The pick up area provides a comfortable waiting space while maintaining clear visibility for staff and families.

Pantry Kitchen/Cafe

Intergenerational Commons

05 *Extracullicular Works*

Creative Studies

A collection of work across sketching, physical model making, furniture design, and art, created throughout my design education and beyond. These studies reflect the way I like to work: making, testing, observing, and exploring ideas across different mediums.
